

EcoCros' Movement Blueprint

■ Vision & Mission

EcoCros' is a grassroots volunteer movement that empowers citizens to combat waste mismanagement, protect the environment, and collaborate with local authorities (like CUDA). The mission: create clean, sustainable, and resilient communities.

■■ Core Features

1. **Volunteer Onboarding** – Bot-assisted signup, guidebook distribution (PDF/print), and a simple quiz to confirm understanding of mission & values. 2. **Community Groups** – Volunteers are organized into location-based groups (e.g., 8 Miles). Captains manage groups, distribute resources, and run sensitization campaigns. 3. **CalPoints Gamification** – Members earn points for verified actions: attending cleanups, reporting hotspots, sensitization, or defaulter reporting. High scorers may be appointed as Captains. 4. **Captain System** – First active volunteers may be pilots; later democracy allows group voting. Captains get roles: distributing meshes, assigning duties, and leading campaigns. 5. **Guidebook** – General EcoCros' rules, values, roles, sensitization campaign structure, and defaulter reporting protocol.

■ Multi-Channel Access

- **Bot (Telegram/WhatsApp/Discord/USSD)**: Main entry for volunteers. - **USSD Users**: Verification calls + printed guidebooks. - **Public Website**: Displays community progress, blogs, status, FAQs, donations, partnerships, hotspot map with EcoCros' pins.

■ Community & Engagement

- Captains organize local meetups, sensitization campaigns, and mesh distribution (shirts, hats, stickers). - Active members may be promoted to roles like graphics, communication, or sensitization team. - Engagement is tracked, and most active members may be emailed for new responsibilities.

■ Waste Defaulter Reporting (New Feature)

- Volunteers can snap photos of waste defaulters (illegal dumping, businesses polluting, etc.) via the bot. - Bot tags location (if possible) and shares with group. - Captains validate before escalation. - Reports circulate in EcoCros groups and are sent to CUDA weekly/monthly. - CalPoints reward for verified defaulter reports.

■ CUDA Integration (New Feature)

- Since CUDA lacks a digital presence, EcoCros acts as the **relay**: • Citizens report issues via EcoCros bot. • EcoCros groups collect and forward to CUDA through phone/radio. • EcoCros volunteers arriving at hotspots receive CUDA's contact method for coordination. - Long-term: build credibility as CUDA's unofficial digital arm until formal collaboration.

■■ Tech Stack & Flow

- **PocketBase**: Lightweight backend for groups, members, CalPoints, guidebook, reports. - **Bot Layer**: Handles onboarding, quizzes, group assignment, defaulter reporting, CalPoints, captain updates. - **Public Website**: Built with modern stack (Next.js or Bootstrap if bootstrapped) – shows blogs, hotspot maps, status, donations. - **Data Flow**: 1. User joins → Bot stores data in PocketBase. 2. Actions tracked → CalPoints updated. 3. Defaulter report → Group → Captain validates → Forward to CUDA. 4. Website pulls PocketBase data for transparency.

■ Resources & Distribution

- Meshes (shirts, hats, tapes, stickers for tools) distributed to Captains. - Captains allocate based on member activity. - Public-facing campaigns use visuals + branded tools.

■ Governance

- Captains are first appointed during pilot, later elected democratically. - Responsibilities: onboarding, distributing materials, leading sensitization, validating reports. - Members follow the EcoCros Guidebook as a standard everywhere. - Accountability via guidebook quiz + activity tracking.
